

- Write python code to verify user_name="Micheal" and password="e3\$w789x", the total no. of attempts are 3. For every wrong user_name and password print= Invalid username or password, upon three attempts fails print Account locked. If i/p are correct print - you have successfully login.

```
attempt=0
```

```
while (attempt ≤ 3):
```

```
    if (attempt == 3):
```

```
        print ("account locked")
```

```
        Exit(0)
```

```
    user_name = input("Enter the username:")
```

```
    password = input("Enter the password:")
```

```
    if (name != "Micheal" or password != "e3$w789x"):
```

```
        print("invalid user_name or password")
```

```
    else:
```

```
        print ("you have successfully login")
```

```
        Exit(0)
```

```
    attempt += 1
```
